TABLE OF CONTENTS

Summary Highlights of October 4-5 survey resultsp. 1
2023 Blue Chip Forecasts Individual and consensus forecasts of annual change in 16 key U.S. economic variables
2024 Blue Chip Forecasts Individual and consensus forecasts of annual change in 16 key U.S. economic variables
History of Annual Consensus Forecasts Annual forecasts from January 2022 to present and selected graphs
Quarterly Blue Chip Forecasts Consensus forecasts of quarterly change in 15 U.S. economic variables through the end of 2024p. 5
Blue Chip International Forecasts 2023 and 2024 consensus forecasts of economic growth, inflation, current account, exchange rates and short-term interest rates for 15 of America's largest trading partners
Recent Developments Graphs and analysis of economic trends (Winnie Tapasanun)
Quarterly U.S. Forecasts Graphs and analysis of latest quarterly consensus forecasts of key U.S. economic variables (<i>Carol Stone, Kathleen Stephansen and Sandy Batten</i>)
International Forecasts Graphs and analysis of selected international consensus forecasts (<i>Kathleen Stephansen</i> , <i>Andy Cates and Sandy Batten</i>)p. 12
Databank Monthly historical data on many key indicators of economic activity
Long-Range Forecasts Results of twice-annual long-range survey. Consensus forecasts for the five years 2025 through 2029 and the five-year period 2030-2034
Special Questions Results of special questions posed to panel members about the economy, financial markets and government policy
Viewpoints A sampling of views on the economy and government policy excerpted from recent reports issued by our panel members p. 17

Calendar -- Release dates for important upcoming economic data releases,

p. 18

FOMC meetings, etc.

Strong Q3, But Sharp Slowdown Expected Just Ahead

Resilience continues. The U.S. economy continues to surprise financial markets, Blue Chip Economic Indicators (BCEI) forecasters and the Federal Reserve with its resilience. The BCEI consensus has raised its outlook for 2023 GDP growth in almost every survey this year and now looks for 2.2% growth. For Q3, the consensus has increased its GDP growth outlook in each monthly survey since June. In the June survey, the consensus looked for GDP to decline 0.3% q/q saar in Q3. In the most recent survey, that expectation has been increased to +3.5%. However, the BCEI consensus looks for a sharp slowdown after the Q3 surge with GDP rising only 0.7% in Q4, 0.2% in Q1 2024 and 0.5% in Q2, yielding a subpar 1.1% increase for all of 2024.

Significant uncertainty continues to surround the measurement of output in the economy. There are two ways to measure output—one by aggregating expenditures on goods and services produced and the other by aggregating the income generated by production. The first measure is the popular GDP gauge; the second is called Gross Domestic Income (GDI). Over the past four quarters, these two measures have diverged significantly, with GDP rising 2.4% over that period while GDI edged up just 0.2%. The gap was closed some by the benchmark revision released in September, which added to GDI previously excluded interest payments by the Federal Reserve to banks, but remains historically quite large. While the size of the current gap between these two measures is not unprecedented, it is the largest since 2008 and depicts two very different economies.

Inflation outlook cloudy. Even with this recent economic resilience, inflation has slowed markedly over the past year with the GDP price index increasing just 1.7% q/q saar in Q2, down from a 40+-year high of 9.1% in the middle of last year. However, more recently the inflation outlook has become clouded. Since the beginning of July, the global price of petroleum has increased more than 20%. This increase found its way into monthly PCE prices in August and will likely spread to other prices in the GDP price index. Indeed, the BCEI consensus looks for the GDP price index to have reaccelerated in Q3, rising 2.7% after the 1.7% Q2 rise. However, as noted above, the consensus looks for a sharp slowdown in the economy in Q4 and the first half of next year and for this to quickly corral inflation, with the rate of increase of the GDP price index slowing to 2.2% by the middle of next year.

So is the labor market outlook. The condition of the labor market has also become clouded. Until recently, financial markets had generally thought that labor markets conditions were softening. Monthly gains in employment had been slowing; the workweek had shortened; job openings had fallen sharply for two consecutive months; and unemployment claims had generally risen since the beginning of this year. However, the most recent releases have cast some doubt on this view. Employment jumped 336,000 in September, nearly twice expectations, with upward revisions to July and August totaling 119,000. Over the past month, unemployment claims

have fallen to below levels that existed in the year prior to the pandemic. And job vacancies rebounded in August, more than making up for the declines in June and July. While the Fed continues to believe that labor markets must soften for it to rein in inflation, its expectation of "by how much" has eased. In the September Summary of Economic Projections (SEP), the FOMC consensus lowered its expectations for the unemployment rate and now expects it to increase to a less alarming 4.1% by the end of 2024, an increase of only 0.3%-point from the current reading and down from 4.5% in the June SEP. The BCEI consensus is only a little less sanguine on the unemployment outlook, expecting the rate to rise to just 4.3% by the end of 2024.

Tighter for longer. The FOMC consensus continues to look for one more 25-bp rate hike before the end of this year. This view was unchanged from the June SEP. However, the resilience of the economy led the FOMC to expect monetary policy to remain tighter for longer. In the June SEP, the FOMC anticipated four 25-bp rate cuts during 2024. In the most recent SEP, they only look for two 25-bp cuts, a change that has roiled financial markets. The BCEI forecast panel narrowly thinks that the Fed has completed its rate hikes. Of 42 respondents to a special question, 24 think the current FFR target of 5.375% will be the peak while the remaining 18 look for one more 25-bp increase before year-end. Moreover, the economy's resilience has also led the BCEI consensus to think that the Fed will be tighter for longer than it had previously thought. Last month, 62% of the panel thought the first cut would not occur until Q2 2024 or later. This month, that percentage jumped to 71%.

Long-term outlook. This month's survey also contains the semiannual longer-term forecasts—extending out to 2034 the estimated trends that underlie the panel's higher frequency outlook. In general, the longer-term outlook in the most recent survey is little changed from that in the March survey. Forecasters usually anticipate that the real GDP will grow on average at its potential rate over the longer term. The BCEI consensus looks for 1.9% growth in real GDP over the 2025-29 period, the same estimate as in March but much slower than the 2.5% growth experienced during the five years prior to the Covid pandemic. On inflation, the consensus expects the Federal Reserve to essentially achieve its 2% target with the PCE price index inflation rate (the measure that the Fed targets) expected to average 2.1% from 2025-29. This is slightly higher than the 2.0% estimate in the March survey. Of particular interest is that even though the economy is expected to grow at around its potential rate and that inflation is expected to stabilize near target, these occur at markedly higher interest rate levels (both short term and long term) than in the five years prior to the pandemic and even at rates higher than the consensus envisaged in March. This points to a tighter underlying monetary policy and higher real interest rates over the longer term than experienced prior to the pandemic.

Sandy Batten (Haver Analytics, New York, NY)

Recent Developments:

Retail Sales Grew a More-Than-Expected 0.6% in August, the Fifth Straight M/M Gain

Total retail sales rose 0.6% m/m (2.5% y/y) in August after gains of 0.5% in July and 0.2% in June. Excluding motor vehicles & parts, retail sales grew 0.6% (2.0% y/y) after a 0.7% gain. Sales of motor vehicles & parts rose 0.3% (4.4% y/y), the fourth m/m rise in five months, after a 0.4% drop. Nonauto sales excl. gasoline & building materials edged up 0.1% (3.6% y/y), the fifth consecutive m/m rise. Gasoline station sales jumped 5.2% (-10.3% y/y), the most since March '22. Clothing & accessory store sales grew 0.9% (1.3% y/y), the fifth straight m/m gain. Electronics & appliance store sales rose 0.7% (-1.8% y/y) vs. a 1.1% drop. General merchandise store sales rose 0.3% (2.0% y/y), the fourth m/m rise in five months. Building materials & garden equipt. store sales increased 0.1% (-4.9% y/y), the third m/m gain in four months. Nonstore retail sales were unchanged (+7.2% y/y) after four successive m/m rises. Furniture & home furnishing store sales, however, fell 1.0% (-7.8% y/y), the sixth m/m fall in seven months. Health & personal care store sales rose 0.5% (7.8% y/y), the eighth consecutive m/m rise. Food & bev. store sales grew 0.4% (2.1% y/y). Restaurant & drinking place sales increased 0.3% (8.5% y/y), the sixth straight m/m gain.

August Housing Starts Fell 11.3% to a Lower-Than-Expected 1.283 Million AR; Lowest Since June '20

Total housing starts fell 11.3% m/m (-14.8% y/y) to 1.283 mil. saar in August after a 2.0% rise to 1.447 mil. in July and a 10.4% drop in June. Starts were 28.8% below the peak of 1.803 mil. in April '22. Singlefamily starts declined 4.3% (+2.4% y/y) to 941,000 vs. a 5.7% rebound to 983,000. Multi-family starts plunged 26.3% (-41.6% y/y) to 342,000, the lowest level since May '20, on top of a 4.9% drop to 464,000. Starts in the West slumped 28.9% (-20.2% y/y) to 281,000 vs. a 16.2% gain and starts in the Midwest fell 7.5% (-12.1% y/y) to 160,000 after a 3.6% rise; both were at the lowest level since March. Starts in the South slid 4.9% (-6.1% y/y) to a four-month-low 745,000 after a 3.7% drop. By contrast, starts in the Northeast rebounded 1.0% (-45.5% y/y) to 97,000 vs. a 2.0% decline. Building permits rose 6.8% (-2.8% y/y) to 1.541 mil., the highest level since October '22, after a 0.1% uptick to 1.443 mil. Single-family permits rose 1.9% (7.1% y/y) to 948,000, the seventh straight m/m rise to the highest level since June '22, after a 0.6% gain to 930,000. Multi-family permits jumped 15.6% (-15.4% y/y) to a three-month-high 593,000 vs. a 0.8% decline to 513,000.

Industrial Production Increased a More-Than-Expected 0.4% in August

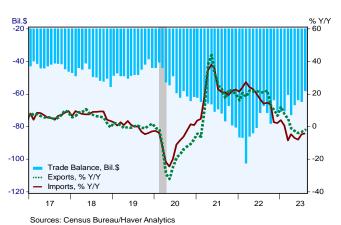

Industrial Production & Capacity Utilization 85 15 80 10 75 0 70 -5 -10 65 -15 Industrial Production Capacity Utilization -20 60 Sources: Federal Reserve Board/Haver Analytics

Total industrial production rose 0.4% m/m (0.2% y/y) in August after a 0.7% July rise (+1.0% initially) and a 0.4% June drop (-0.8% previously). Mining activity recovered 1.4% (3.9% y/y), the largest m/m gain since January, after a 0.2% decline. Utilities output rose 0.9% (1.2% y/y) after a 4.4% July rise and three straight m/m drops. Mfg. production inched up 0.1% (-0.6% y/y) after a 0.4% rise, w/ durable goods up 0.1% (0.6% y/y) and nondurable goods up 0.2% (-2.0% y/y). Motor vehicles fell 5.0% (+5.9% y/y) vs. a 5.1% rebound, but aircraft production rose 4.8% (11.0% y/y), the largest of six straight m/m rises. Output of selected high-tech products grew 0.8% (9.7% y/y), the seventh consecutive m/m gain. Business equipt. rose 0.8% (0.1% v/v) and materials production rose 0.7% (1.2% v/y), posting the second successive m/m rise. In contrast, construction supplies slid 0.4% (-2.5% y/y), the third m/m slide in four months. Consumer goods output fell 0.2% (-0.4% y/y) vs. a 1.2% rise, w/ durable consumer goods down 2.4% (-0.8% y/y) and nondurable consumer goods up 0.4% (-0.4% y/y). Capacity utilization rose to 79.7%, the highest since April, from 79.5%. Mfg. capacity utilization held steady at 77.9%.

Recent Developments:

Trade Deficit Narrowed to \$58.30 Billion in August, the Smallest Since September 2020

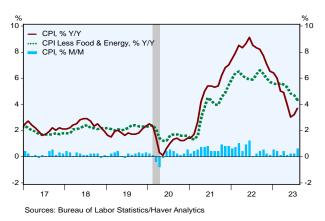

Goods & Services Trade Balance

The U.S. trade deficit in goods & services narrowed to \$58.30 billion in August from \$64.72 billion in July, smaller than the \$67.32 bil. in Aug. '22. Exports rose 1.6% m/m (-2.1% y/y) after rising 1.7%. Imports fell 0.7% (-4.4% y/y), the third m/m fall in four months, after a 1.7% rise. The deficit in goods trade fell to a five-month-low \$84.47 bil. from \$89.93 bil. Goods exports rose 2.3% (-5.8% y/y) after a 1.7% rise, led by gains of 4.9% (4.6% y/y) in nonauto consumer goods, 4.7% (-18.3%) y/y) in industrial supplies, and 3.7% (7.3% y/y) in other goods, but auto exports fell 8.3% (+16.3% y/y). Imports of goods fell 1.0% (-5.0% y/y) vs. a 2.1% rise, led by m/m drops of most end-use categories, while imports for industrial supplies rebounded 5.1% (-17.2% y/y). Petroleum imports jumped 13.4% (-17.3% y/y). Nonpetroleum imports fell 2.1% (-3.7% y/y). The surplus on services trade rose to \$26.17 bil., the highest level since Mar. '18, from \$25.21 bil., led by increased tourism. Services exports rose 1.2% (7.8% y/y), the sixth m/m rise in seven months. Services imports ticked up 0.1% (-1.6% y/y). The real goods trade deficit fell to \$83.92 bil., the smallest since March. The goods trade deficit w/ China shrank to a five-month-low \$22.74 bil.

Consumer Price Inflation Rose to 3.7% Y/Y in August; Core CPI Eased to 4.3% Y/Y

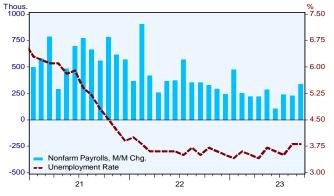

Consumer Prices

Consumer prices increased an expected 0.6% m/m in August after rises of 0.2% in July and June. The y/y rate rose to 3.7%, the highest since May, from 3.2%. The CPI less food & energy rose 0.3% after a 0.2% rise. The core y/y rate eased to 4.3%, the lowest since Sept. '21, from 4.7%. Energy prices jumped 5.6% (-3.6% y/y), the most since June '22, reflecting price rises of 10.6% (-3.3% y/y) in gasoline, 9.1% (-14.8% y/y) in fuel oil, 0.2% (2.1% y/y) in electricity, and 0.1% (-16.5% y/y) in natural gas. Nonenergy svcs. prices rose 0.4% (5.9% y/y). A 0.3% gain (7.3% y/y) in shelter prices reflected rises of 0.5% in rents and 0.4% in owners' equivalent rent partly offset by a 3.0% drop in lodging away from home. Transportation prices grew 2.0% (10.3% y/y), w/ a 4.9% m/m rise in airfares. Medical care svcs. costs rose 0.1% (-2.1% y/y). Food prices rose 0.2%, the fourth straight m/m rise; the y/y rate fell to 4.3%, the lowest since Aug. '21, from 4.9%. Goods prices less food & energy dipped 0.1% (+0.2% y/y), the third straight m/m decline, led by a 1.2% drop (-6.6% y/y) in used vehicle prices. New vehicle prices rose 0.3% (2.9% y/y) and apparel prices rose 0.2% (3.1% y/y).

September Job Gains of 336K Doubled Estimates, Largest Since Jan.; Jobless Rate Unchanged at 3.8%

Nonfarm Payrolls & Unemployment Rate

Sources: Bureau of Labor Statistics/Haver Analytics

Nonfarm payrolls rose 336K (2.1% y/y) in September after rises of 227K in August (+187K initially) and 236K in July (+157K previously); the gain was above 300K for the first time since January and above the avg. m/m rise of 267K over the prior 12 months. The jobless rate held steady at 3.8%. The total jobless rate, incl. those marginally attached & working part-time for econ. reasons, fell to 7.0% from 7.1%. Total priv. payrolls grew 263K (2.0% y/y), w/ priv. svcs. jobs up 234K (2.0% y/y) and goods-producing jobs up 29K (1.6% y/y). Jobs rose in leisure & hospitality (+96K), health care (+40.9K), prof. & technical svcs. (+29K), and soc. assistance (+25K) but fell in info svcs. (-5K). Mfg. jobs gained 17K (0.7% y/y) after an 11K rebound, w/ rises of 13K in durable goods and 4K in nondurable goods. Construction jobs rose 11K (2.8% y/y), the 19th m/m gain in 20 months. Gov't. jobs surged 73K (2.8% v/y). Avg. hourly earnings rose 0.2% m/m; the v/y rate eased to 4.2%, the lowest since June '21, from 4.3%. The avg. workweek was unchanged at 34.4 hrs. The steady jobless rate at 3.8% reflected rises of 5K in unemployed, 90K in the labor force, and 86K in civilian employment. The participation rate held steady at 62.8%.

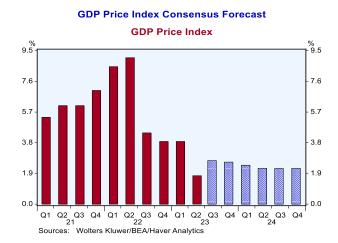

Quarterly U.S. Forecasts:

Real GDP

Real GDP Consensus Forecast Real Gross Domestic Product 8.0 5.0 -1.0

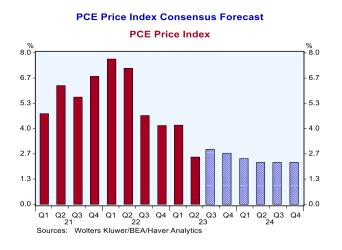

Real GDP in Q2 2023 grew at an annual rate of 2.1% from Q1, according to data released on September 28. This was the same growth rate as in the late-August report, although the more recent estimate reflects the BEA's annual benchmark revisions and the change to a 2017 base from the 2012 base used before. Also, while the total growth rate for Q2 is the same as before, revisions to the spending components are mixed. Consumer spending now has less growth in Q2, 0.8% saar versus 1.7% before. Nonresidential fixed investment was revised higher to 7.4% versus 6.1% before and residential investment fell at a 2.2% rate versus a 3.6% decline before. For Q3 GDP, the Blue Chip Economic Indicators forecast panel now has a consensus estimate of 3.5% growth after their 2.9% projection in the prior survey. The current survey has 3.2% growth in PCE, up from 2.7% before but 1.2% growth in nonresidential fixed investment, down from 1.4% estimated a month ago. For Q4, the panel forecasts a sharp slowing of GDP growth to just 0.7% annualized, although this is marginally more than the 0.6% in the prior forecast. The October pattern of quarterly estimates yields Q4 over Q4 growth of 2.1%, up from 1.9% in the September Blue Chip survey.

Chained GDP Price Index

Inflation in Q2 as measured by the GDP price index was revised even lower in the third estimate—to 1.7% q/q saar from 2.0% in the second estimate and 2.2% in the advance report. This was the lowest inflation rate since prices fell sharply during the Covid lockdown in Q2 2020. The 4.1% inflation rate previously reported for Q1 was revised down to 3.9% in the benchmark revision. The rise in the PCE price index in Q2 was unrevised at 2.5%. The increase in prices of nonresidential fixed investment slowed to 0.2% in Q2 from 1.1% previously while the 7.2% gain previously reported for Q1 was revised down to 6.4%. Prices of residential investment fell 0.9% versus -1.2% previously. Export and import prices continued to fall, and by a little more than previously estimated. Prices paid by governments fell 1.1%, down from the previously reported 0.2% decline, led by a 2.9% drop in prices paid by state and local governments (vs -1.6% previously). With global energy prices having rebounded during Q3 (the price of WTI is more than 20% since the end of June), the BCEI consensus is looking for some reacceleration of GDP price inflation to 2.7% in Q3 and 2.6% in Q4 but declining to 2.2% by mid-2024.

Chained PCE Price Index

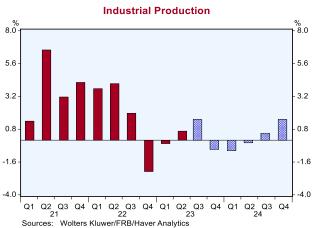

The sharp slowdown in PCE inflation to 2.5% q/q saar in Q2 was unrevised in the third estimate. However, the inflation rates for each of the preceding three quarters were revised up slightly in the benchmark revision. For those three quarters, headline PCE inflation is now estimated at 4.3% saar versus 4.0% previously. The rebound in global energy prices since early July was reflected in the 0.4% m/m jump in the headline PCE price index in August. Prices of energy goods and services jumped 6.1% m/m not annualized, their largest monthly gain since June 2022, and accounted for nearly two-thirds of the August increase in the headline index. By contrast, in the first seven months of this year, energy prices had fallen at a 7.8% annual rate. Apart from the surge in energy prices, other price increases continued to slow, with the core index (that is, excluding food and energy prices) edging up just 0.1% m/m in August, its smallest monthly gain since November 2020. The BCEI consensus looks for the rebound in energy prices to have pushed up headline PCE inflation in Q3 and Q4, to 2.9% and 2.7% respectively, but for inflation to slow to 2.2% by mid-2024.

Quarterly U.S. Forecasts:

Industrial Production

Industrial Production Consensus Forecast

Industrial production (IP) is set to post its best annualized quarterly advance in 2023 of close to 2.0% during Q3, thanks to robust respective monthly advances of 0.7% and 0.4% in July and August. Manufacturing output rose 0.3% in July and 0.1% in August. The August rise was held back by a sharp 5.0% monthly decline in motor vehicles and parts. Excluding autos, manufacturing output rose 0.6%. The manufacturing ISM reports continue to depict a more depressed state in the sector. Activity in manufacturing continued to contract in September for the 11th consecutive month, registering a reading of 49.0, though slightly better than the August ISM index of 47.6. Encouragingly, production expanded, with the index at 52.5 in September, up from 50.0 in August, and the employment index rose to 51.2 in September from 48.5 (a reading above 50 points to expansion.) The new orders and export orders components remained in contraction territory. The October BCEI forecasts IP growth to be 1.5% in Q3, up from the September forecast of 0.5%, followed by respective declines of 0.7% and 0.8% in Q4 and Q1 2024. IP is projected to show a 0.3% rise in 2023 and a 0.1% rise in 2024.

Real Disposable Personal Income

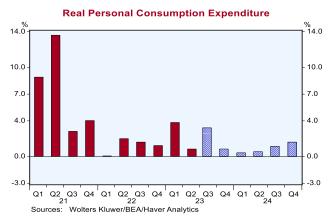

Real Disposable Income Consensus Forecast

Personal income rose 0.4% (4.8% y/y) in August, reflecting rises in wages and salaries of 0.5% m/m and in rental income of 1.0% m/m. Disposable personal income (DPI) rose by a more modest 0.2% m/m as taxes strengthened 1.5% m/m during the month. However, personal consumption expenditures (PCE) prices rose 0.4% m/m, after a 0.2% m/m advance in July, so, when adjusted for inflation, personal income fell by less than 0.1% m/m (1.3% y/y) and DPI fell 0.2% m/m (\pm 3.7% y/y), marking the second consecutive monthly decline in real DPI. The personal saving rate dropped to 3.9% in August from 4.1% in July. Third quarter to date real DPI shows an annualized quarterly decline that may be challenging to offset with only one month to go unless PCE inflation decelerates and/or compensation rises markedly. The 0.4% monthly rise in aggregate weekly payrolls during September, up slightly from the 0.3% advance in August, does not point to a significant acceleration in compensation during the month. The October BCEI forecasts increases in real DPI growth of 0.7% in Q3, 1.2% in Q4 and 1.7% in Q1 2024, yielding a rise of 3.9% in 2023 and an expected increase of 1.5% in 2024.

Real Personal Consumption Expenditures

Real PCE Consensus Forecast

Real consumer spending in August edged up just 0.1% from July at a seasonally adjusted monthly rate. July's increase from June was unrevised at 0.6%. These later estimates for personal consumption expenditures (PCE) while seeming to show little change from the prior published numbers, do reflect the annual revisions in the National Accounts. The July total includes a 1.3% advance in spending on motor vehicles and parts, which then fell 0.9% in August. Total spending on durable goods increased 1.2% in July and then eased 0.3% in August. For nondurable goods, outlays rose 0.5% in July and then eased by 0.1% in August; this included a decline of 1.8% in gasoline and other energy in July and a further decrease of 0.4% in August. In current dollars, the July amount for gasoline fell 1.6%, but then surged 9.8% in August. For Q2 as a whole PCE had grown at 0.8% annual rate, reported on Sep 29 and revised from 1.7% reported at the end of August. For all of Q3, the Blue Chip forecast panel estimates that PCE increased at a 3.2% rate, which would be followed by just an 0.8% advance in Q4. That makes the year, Q4 over Q4, 2.2% after 1.2% in 2022.

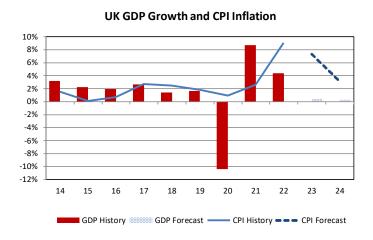

International Forecasts:

Euro Area

Euro Area GDP Growth and CPI Inflation 10% 8% 6% 4% 2% 0% -2% -4% -6% -8% 14 15 16 17 18 19 20 21 22 23 24

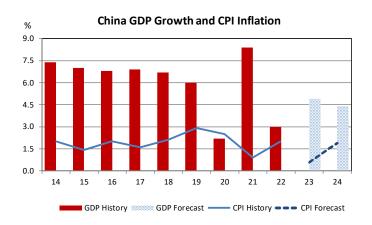

In a speech in early October, ECB Vice-President Luis de Guindos stated that economic activity had largely stagnated over the first half of the year and is expected to remain subdued in the coming months. He attributed the weakness to soft foreign demand and tight financing conditions that have particularly affected the manufacturing sector, though the services sector is now starting to "catch down" to manufacturing. The September PMI surveys for both manufacturing and services were in contraction territory. Moreover, the European Commission economic sentiment index at 93.3 in September remains below its long-term average of 100 for the 15th consecutive month. Meanwhile, the consumer sentiment index showed a deterioration to -17.8% last month from -16% in August. Inflation fell significantly to 4.3% in September from 5.2% in August. While recognizing the impact of the rate hikes to date, the ECB still sees both the scope and speed of the transmission as remaining uncertain, particularly as it pertains to the real economy, underscoring their data-dependent policy approach. The October Blue Chip forecasts GDP growth to be just 0.5% this year and 0.6% next year, and inflation to slow from 5.6% this year to 2.6% in 2024.

UK

The UK economy is exhibiting increasing signs of stress. The monthly estimate of GDP fell by 0.5% in July, thanks to a broadly based retreat in its three constituent output components, production, services and construction. That weakness found an echo in the labor market too with latest data showing the unemployment rate in the three months to July rising to 4.3%, up 0.5%-point from the previous three months. Meanwhile, the more forward-looking composite PMI, edged down to 48.5 in September, from 48.6 in August, thereby signaling the weakest performance from the economy since January. Partly thanks to these growing signs of economic stress, inflation has continued to cool in recent weeks and by more than expected. Core CPI inflation, for example, was 6.2% y/y in August 2023, down sharply from 6.9% in July. Against this backdrop, the BoE decided to pause its hiking cycle at its September 21st meeting. However, the decision was not unanimous and was accompanied by unchanged guidance, suggesting that the door to further hikes remains open. That being said, our special question on UK monetary policy this month reveals that 50% of our panelists believe the BoE has now reached the end of its tightening cycle.

China

China's post-pandemic recovery has disappointed expectations but recent data suggest the economy may have turned a corner. Retail sales and industrial production growth, for example, picked up pace in August, while exports registered reduced rates of decline. The latest official composite PMI reading was firmer than expected, climbing to 52.0 in September, after 51.3 in August, and a second consecutive monthly advance. Broader deflation worries have eased as well off the heels of a headline CPI inflation rate of +0.1%y/y in August after -0.3% in July. On the downside, China's FAI growth rose by just 3.2% y/y in August, after 3.4% in July and pulled down by ongoing weakness in real estate investment. That squares with anecdotal evidence suggesting that property developers are still stressed. Combined with the absence of a compelling policy response, many panelists have been questioning the durability and strength of any cyclical upturn from here. In response to a special question, 72% of our panelists have been unimpressed by recent policy initiatives. Against this backdrop, the consensus forecast for GDP growth has been lowered to 4.9% in 2023 from a previous 5.0% and to 4.4% in 2024 from a prior 4.5%.

Long-Range Consensus U.S. Economic Projections

I. The table below shows the latest U.S. Blue Chip Consensus projections by years for 2025 through 2029, an average for the five-year period 2025-2029, and an average for the next five-year period 2030-2034. There are also Top 10 and Bottom 10 averages for each variable. *Apply these projections cautiously. For the most part economic and political forces over such long time spans cannot be evaluated with accuracy.*

Special Questions:

1. What do you think will be the peak federal funds rate target (midpoint of range) in the current tightening cycle?

Consensus	5.47%
<u>Top 10</u>	5.63%
Bottom 10	5.37%

2. When will the first fed funds rate cut occur?

Q4 2023	<u>Q1 2024</u>	<u>Q2 2024</u>	<u>Q3 2024</u>	<u>Later</u>
7%	21%	43%	21%	7%

3. a. What is your estimate of the long-term neutral fed funds rate?

Consensus	2.58%
<u>Top 10</u>	3.05%
Bottom 10	2.16%

b. Since before the pandemic, has it increased, decreased, or remained the same?

	Increased 64%	Decreased 0%	Remaine	d the same 36%
4. a. Has the European Cent	ral Bank completed its t	ightening cycle?	Yes 63%	No 37%
4. a. Has the European Cent	rai Bank completed its t	ightening eyele.	103 0370	110 3770
b. Has the Bank of Engla	nd completed its tighten	ing cycle?	<u>Yes</u> 50%	<u>No</u> 50%

5. a. Does the weakening of China's economy pose meaningful risks to the outlook for global growth? Yes 86% No 14%

b. Do you think recent policy measures in China will boost its growth rate? Yes 28% No 72%

Supply-Side Upside Surprise in September; Jobs Report Boosts Soft Landing Odds

U.S. employers added a robust 336,000 nonfarm payroll jobs in September, and job growth in August and July were revised up a net 119,000. September's job growth was nearly twice the 170,000 consensus forecast. Factoring in the upside surprise and revisions, job growth averaged a solid 266,000 over the last three months, considerably faster than the 153,000 three-month moving average of the prior report.

The unemployment rate held steady at 3.8%, with growth of the labor force slowing after a big increase in August. The unemployment rate for men over age 20 edged up to 3.8% from 3.7%; for women 20+ edged down to 3.1% from 3.2%, and for teenagers fell to 11.6% from 12.2% (the school year's start could have had an effect there). Unemployment for White Americans was unchanged at 3.4%; for Black Americans rose to 5.7% from 5.3%; for Asian Americans fell to 2.8% from 3.1%; and for Hispanic or Latino Americans fell to 4.6% from 4.8%.

The labor force participation rate was unchanged at 62.8%; it is up half a percentage point over the last year, allowing a modest margin of slack to open in the economy. The labor force participation rate of Americans between 25 and 54 years of age—when most people are out of school and pre-retirement—was 83.5%, unchanged on the month at the highest since 2002. The labor force participation rate for all adults is down since the pandemic, reflecting a smaller share of people over 55 in the labor force.

The unemployment rate of Americans with a disability was 7.3%, unchanged from a year earlier—the Bureau of Labor Statistics doesn't adjust this indicator for seasonal variations, so month-over-month comparisons are tough to interpret. 22.5% of disabled Americans over 16 were working September 2023, up from 21.5% in September 2022. There are about 4 million more disabled adults in the United States than before the pandemic, an increase of more than 10%, and more of them are working. That reflects the dual impact of Covid-related disability and remote jobs that make it easier for people with disabilities to work.

Average hourly earnings rose 0.2% on the month, below the 0.3% consensus forecast. From a year earlier, average hourly earnings were up 4.2%, the slowest increase since June 2021—outpacing the CPI for a fourth consecutive month. The average workweek held steady at 34.4 hours. Aggregate hours worked by all payroll employees rose a moderate 0.2% on the month and were up 1.3% on the year. The last three months have seen the slowest year-ago growth of hours worked since the recovery from the pandemic went into high gear in 2021.

September's jobs report keeps the U.S. economy on course for a soft landing, meaning inflation could return to the Fed's target without a serious downturn. The month's robust job growth points to solid real GDP growth in the third quarter; Comerica forecasts 2.8% annualized growth, up from 2.1% in the second quarter and the fastest increase since the end of 2021. Mean-

while, wage-price pressures are subsiding, visible both in slower growth of average hourly earnings and in ADP's independently-produced data on private wages. The Fed would feel most comfortable with average hourly earnings growth of around 3.5%, which is their 2% inflation target plus their guess at trend growth of output per hour of around 1.5%.

One upside risk to wage growth in 2024 is larger wage increases for unionized workers given the large number of contracts under renegotiation this year. But unions only represent 6% of U.S. private workers. For the rest of the workforce—that is, the vast majority—a slower pace of job market churn is leading to slower wage increases as fewer workers quit jobs for higher wages at competitors, and as fewer employers offer higher salaries to lure those workers away. That will probably take more steam out of wage growth than union wage settlements pump into it.

The 10-year Treasury yield jumped to the highest since 2007 after the jobs report's release as the discount of 10-year interest rates relative to 2-year interest rates shrank. The jump in long-term interest rates is a financial Rorschach blob: The pessimistic read is as a warning that the fiscal deficit is spiraling out of control, while the optimistic read is to see it as evidence that financial markets are pricing in less risk of a recession. October 12's release of the Treasury Department's September financial statement will provide data to inform the debate. The deficit in July and August combined was \$299 billion smaller than in July and August of 2022. If the deficit shrank in the entire third quarter, it will bolster the more optimistic interpretation of rising long-term interest rates.

The Fed will see the jobs report as evidence that a soft landing is more likely than a serious downturn, and that inflationary pressures are subsiding although the pace of improvement is uncertain. The Fed could still raise the federal funds rate a final quarter percentage point before ending the current rate hike cycle, but it's a very close call. Arguing for a final rate hike, housing prices have surprised to the upside over the last few months, which could fuel continued shelter price inflation in 2024. Arguing against a hike, the ten-year Treasury yield is up by a full percentage point over the last three months despite the Fed only raising its policy rate a quarter percent; that means higher mortgage rates, which will likely slow house price increases. More broadly, the Fed could see higher long-term interest rates as doing the heavy lifting for them and making further increases to short-term rates unnecessary.

Whether the Fed hikes or not near-term, the path is clearing for them to pivot to rate cuts in mid-2024 as wage growth and core inflation slow further. Also, wholesale prices of gasoline traded in commodity markets fell to the lowest since the turn of the year in early October, which consumers are starting to see at the pump. At the same time, long-term financing costs are expected to stay high in 2024 as the current, unusual discount of long-term interest rates relative to short-term interest rates goes back to a more typical premium.

EXPLANATORY NOTES

For 47 years, *Blue Chip Economic Indicators'* monthly survey of leading business economists has provided private and public sector decision-makers timely and accurate forecasts of U.S. economic growth, inflation and a host of other critical indicators of business activity. The newsletter utilizes a standardized format that provides a fast read on the prevailing economic outlook. The survey is conducted over two days, generally during the first week of each month. Forecasts of U.S. economic activity are collected from more than 50 leading business economists each month. The newsletter is generally finished on the third day following completion of the survey and delivered to subscribers via e-mail or first class mail.

The hallmark of *Blue Chip Economic Indicators* is its *consensus forecasts*. Numerous studies have shown that by averaging the opinions of many experts, the resulting consensus forecasts tend to be more accurate over time than those of any single forecaster.

Annual Forecasts On pages 2 and 3 of the newsletter are individual and consensus forecasts of U.S. economic performance for this year and next. The names of the institutions that contribute forecasts to these pages are listed on the left of the page. They are ranked from top to bottom based on how fast they expect the U.S. economy to expand in the current year. Some of these institutions have one or more asterisks (*) after their names, denoting how many times they have won the annual Lawrence R. Klein Award for Blue Chip Forecast Accuracy. The award winner is determined by W.P. Carey School of Business at Arizona State University.

Across the top of pages 2 and 3 is a list of the variables for which the individual cooperators have provided forecasts. Definitions and organizations that issue estimates for these variables are found at the bottom of page 3. For columns 1-10, the forecasts are for the year-over-year percent change in each variable. Columns 11-13 represent average percentage levels of the year in question. Column 16 is an inflation-adjusted dollar level, measured in billions of chained 2012 dollars. High and low forecasts from the panel members for each variable are denoted with an "H" or "L".

Immediately below the forecasts of the individual contributors are this month's consensus forecasts. The consensus is derived by averaging our panel members' forecasts for each variable. Below the consensus forecasts are averages of this month's ten highest and ten lowest forecasts for each variable. Below them are last month's consensus forecasts. To put the forecasts in context, we include four years of historical data for each variable at the bottom of page 2. Please note that these figures can change due to government revisions of previously released estimates. Below the historical data are the number of forecasts changed from a month ago for each variable, the median forecast for each variable and a diffusion index. The diffusion index serves as a leading indicator of future changes in the consensus forecast. A reading above 50% hints of future increases in the consensus; a reading below 50% hints of future declines. The diffusion index is calculated by adding to the number of forecasters who raised their forecasts for a particular variable this month, half the number of those who left their forecasts unchanged, then dividing the sum by the total number of those contributing forecasts.

Historical Annual Consensus Forecasts Page 4 contains the forecasts from previous issues for the current and subsequent year so that subscribers can see how the outlook has changed over time. Each issue also includes graphs and analysis focusing on noteworthy changes and trends in the consensus outlook.

Quarterly Forecasts Page 5 contains quarterly historical data and consensus forecasts of the U.S. economy's performance. For columns 1-10, the forecasts are for the quarter-over-quarter, seasonally-adjusted, annualized percent change in each variable. Columns 11-13 represent average percentage levels for the quarter in question. Columns 14 and 15 represent seasonally-adjusted, annualized levels for the quarter, measured in billions of inflationadjusted dollars. As is the case on pages 2-3, the consensus quarterly forecasts on the top half of page 5 are simple averages of our contributors' forecasts. The high-10 and low-10 forecasts are averages of the 10 highest and 10 lowest forecasts for each variable. At the bottom of page 5 are additional quarterly consensus forecasts for Real GDP, GDP Price Index, Industrial Production and Consumer Price Index. These figures are produced by taking the annualized quarterly consensus forecasts found on the top of page 5 and computing a quarterly dollar value for Real GDP, and average quarterly index levels for the GDP Price Index, Industrial Production and the Consumer Price Index. We then compute a year-over-year percentage change between the relevant quarter and the corresponding quarter of the previous year.

International Forecasts Pages 6-7 contain historical data and consensus forecasts of five key economic variables for 15 of the U.S.'s largest trading partners. A list of the institutions contributing forecasts to these pages can be found at the bottom of page 7. Columns 1 and 2 are forecasts of the year-over-year percent change in inflation-adjusted economic growth and consumer price inflation for this year and next. Column 3 is each nation's estimated current account surplus or deficit, reported in billions of current U.S. dollars. Column 4 is the estimated value of each nation's currency versus the U.S. dollar at the end of this year and next. Column 5 is the estimated level of interest rates on 3-month interest rates in each nation at the end of this year and next. Immediately below this month's consensus and the top 3 and bottom 3 averages for each variable are last month's forecasts and a limited amount of historical data. The historical data may change from month-to-month due to government revisions.

Special Questions On page 16, we report on panel members' answers to our special questions. Individuals' responses to the special questions are never displayed, only consensus, top-10 and bottom-10 results. *In March and October, we publish our semi-annual, long-range surveys*. In addition to our usual forecasts for this year and next, the semiannual, long-range survey results provide subscribers with consensus forecasts of all the variables found on pages 2 and 3 for the each of the following five years, plus an average for the five-year period after that.

Blue Chip Econometric Detail With the March, June, September and December issues, subscribers also receive a four-page quarterly supplement entitled *Blue Chip Econometric Detail*. The supplement contains forecasts of an expanded list of economic and financial variables that are derived from the consensus forecasts found in *Blue Chip Economic Indicators*. Macroeconomic Advisers by IHS Markit of St. Louis, Missouri produces this forecast detail based on a simulation of its econometric model of the U.S. economy.

Should you have questions about the contents, or methods used to produce **Blue Chip Economic Indicators**, please contact Joseph Aguinaldo at (212) 986-9300 or email him at: bluechip@haver.com.
